THE COLLINS  
*CAST CAST-STEEL PLOWS.*

OVER 100,000 IN USE.

HE mode of manufacture briefly described is as follows :

A superior quality of Steel, by a patented and difficult process, is cast in Smooth Metallic Moulds of the exact shape required for the Steel Sections.

The Steel is so distributed that the parts exposed to the greatest wear have increased thickness, and, consequently, great durability. Each Section is highly tempered, ground, and polished.

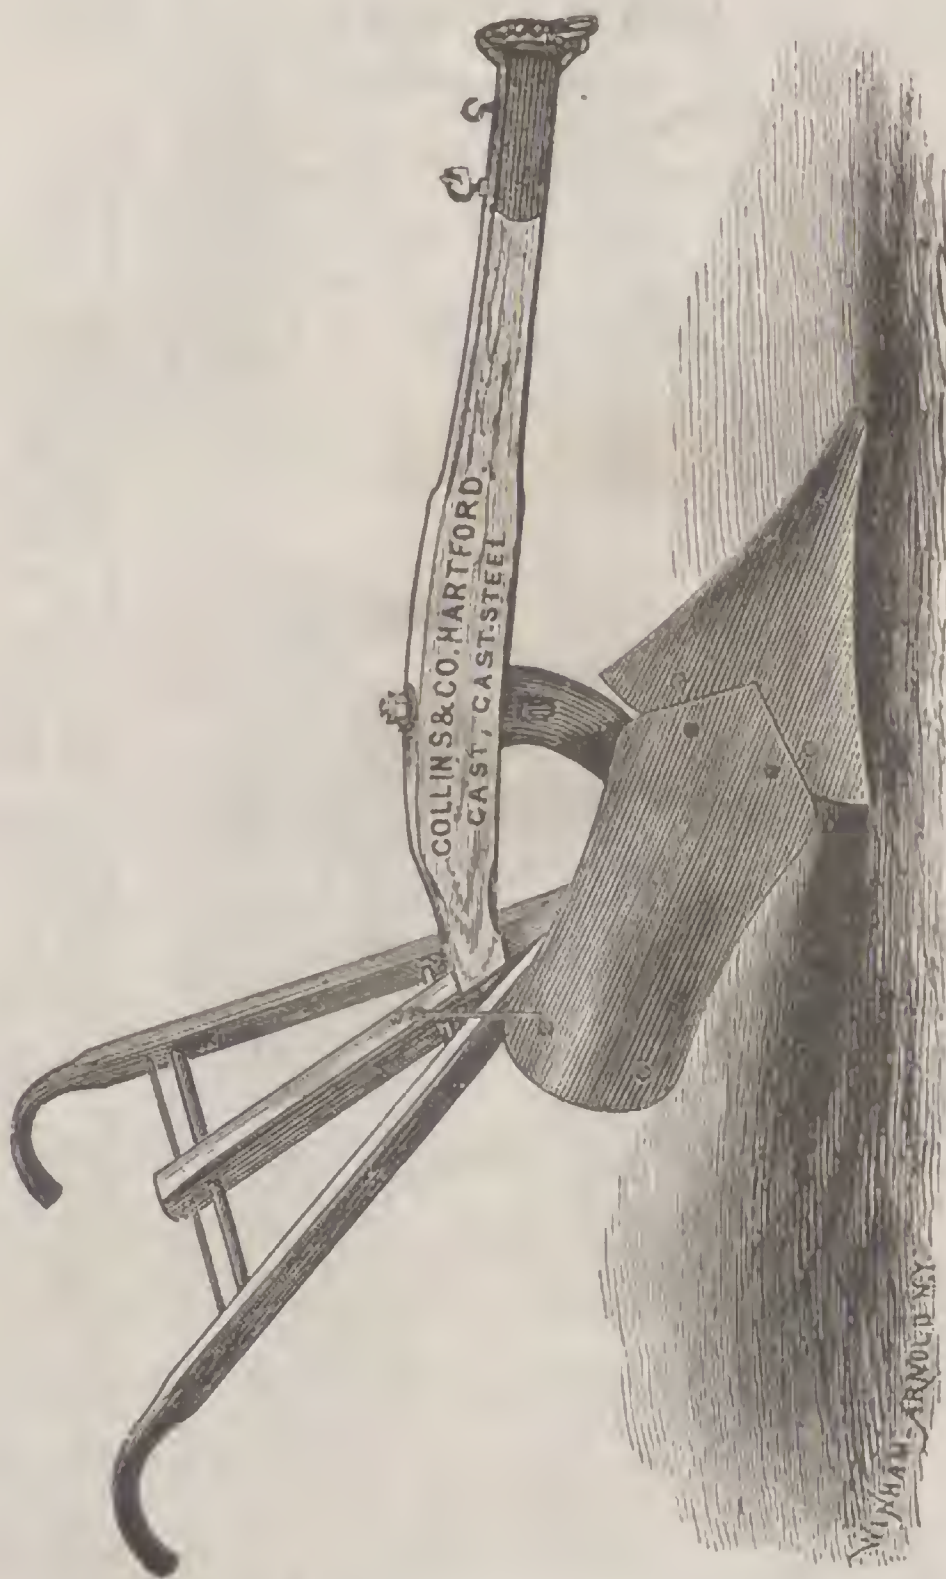

The high finish, perfect surface, and extreme hardness, prevent any earth from adhering to the Steel, and the result is a Plow with no equal in scouring qualities or durability.

COLLINS & CO'S Double Furrow Plow, Chapman's Patent. Plows a combined furrow of 19 to 21 inches wide, and from 3 to 8 inches deep. Draft is same as single 15 inch Plows. Easily worked by two horses.

**Weight, 190 lbs. Price, \$45 00.**

COLLINS, CAST CAST-STEEL SWIVEL OR SIDE HILL PLOW.

Price, \$18 00.

Extra Shares, each, \$4 00.
